

Estifanos Beyene

Charlotte, NC | estifanosbeyene21@gmail.com | (571) 275-6916 | linkedin.com/in/estifanos-beyene | github.com/justEstif

TECHNICAL SKILLS

Languages: JavaScript/TypeScript, Go, Ruby, Python, SQL
Frameworks: React/Next.js, Redux, Express.js, NestJS, Ruby on Rails, Django, TailwindCSS
Databases: PostgreSQL, MongoDB, Redis, Supabase
Developer Tools: Docker, Vercel, Git, GitHub Actions, New Relic

EXPERIENCE

Software Engineer

Jun 2024 – Present

Red Ventures

Charlotte, NC

- Spanned multiple teams, owning and maintaining Express/NestJS backend, Next.js frontend, and cart/checkout flow work; led New Relic vs. LogRocket POC that drove the team's dual-tool observability strategy
- Led end-to-end implementation of AI chat platform — partner alignment, configuration, QA, and documentation — refactoring to a provider/context architecture; generating an estimated 200–300 additional monthly orders to the platform
- Drove AI adoption — prototyped Jira-to-Cursor/Codex automation, built a ticket quality review assistant, mentored fellow engineers, and delivered 5+ org-wide presentations on AI-assisted development
- Diagnosed and resolved multiple production errors including API routing failure affecting 30% of cart requests; architected surrounding infrastructure — new API routes, OpenAPI updates, Terraformdynamic config gating, and routing safeguards
- Hardened cart stability — resolved enrichment race conditions via singleton promise pattern, fixed blank-state and cleanup-loop defects, guarded against loader deadlocks

Full-Stack Engineer

Jun 2023 – Oct 2023

Brain Sprite

Remote

- Architected and shipped a full-stack Ed-tech app and Chrome extension using Supabase, Next.js, and OAuth — solving user security concerns at launch
- Built end-to-end auth via Supabase Auth, Edge Functions, and PostgreSQL RLS — enforcing fine-grained access control across the platform

PROJECTS

Specto | *Go, Chi, PostgreSQL, sqlc, Templ, HTMX, Genkit*

specto.estifanos.cc

- Plugin-driven media consumption dashboard aggregating Spotify, YouTube, Netflix, and more into a unified enriched timeline — two-layer enrichment pipeline (platform APIs + LLM classification via Genkit).

qry | *Go*

justestif.github.io/qry

- Web search CLI for agents and terminals — routes queries through swappable adapter binaries, supports concurrent multi-source merging with fallback routing, and always outputs JSON.

todo.open | *Go, JSONL, HTTP*

github.com/justEstif/todo-open

- Local-first task runtime with a stable HTTP API, pluggable sync adapters, and conflict resolution — built for human and agent clients without cloud dependencies.

VOLUNTEER EXPERIENCE

Open Source Contributor

Present

Epicenter — Y Combinator Startup

SvelteKit, Rust

- Implemented devcontainer/Docker setup and authored contributing guidelines for an open-source local-first productivity ecosystem

Front-End Developer

Present

Creolio

Next.js, Django

- Built user-facing features for a Spanglish language learning platform

EDUCATION

Western Governors University

Aug 2024

BS Computer Science

Graduated
